DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to setting an attenuation level to control the output of a power amplifier, classified in class 330, subclass 278.
- II. Claims 4-26, drawn to generating outphased modulated signals from a phase shifted amplitude modulated signal, classified in class 375, subclass 300 and 455, subclass 108.

Inventions I and II are directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, group I is directed to a method of comprising setting an attenuation level to set an average output power of a power amplifier whereas group II is directed to generating outphased modulated signals.
